

CSCE 580: Introduction to Al

CSCE 581: Trusted Al

### Lecture 3: Representing and Organizing Data

PROF. BIPLAV SRIVASTAVA, AI INSTITUTE 31<sup>ST</sup> AUG 2023

Carolinian Creed: "I will practice personal and academic integrity."

Credits: Copyrights of all material reused acknowledged

CSCE 580, 581 - FALL 2023

### Organization of Lecture 3

- Introduction Segment
  - Recap of Lecture 2
- Main Segment
  - Data preparation
  - Knowledge representation/ graph
  - Ontology
- Concluding Segment
  - About Next Lecture Lecture 4
  - Ask me anything

### Introduction Section

## Recap of Lecture 2

- Data formats
- Big data v/s open data
- Open data
  - City data
  - Data access via Open311
  - Publishing data systematically

### Where We Are

#### CSCE 580/ 581 - In This Course

- Week 1: Introduction, Aim: Chatbot / Intelligence Agent
- Weeks 2-3: Data: Formats, Representation and the Trust Problem
- Week 4-5: Search, Heuristics Decision Making
- Week 6: Constraints, Optimization Decision Making
- Week 7: Classical Machine Learning Decision Making, Explanation
- Week 8: Machine Learning Classification
- Week 9: Machine Learning Classification <u>Trust Issues and</u>

#### Mitigation Methods

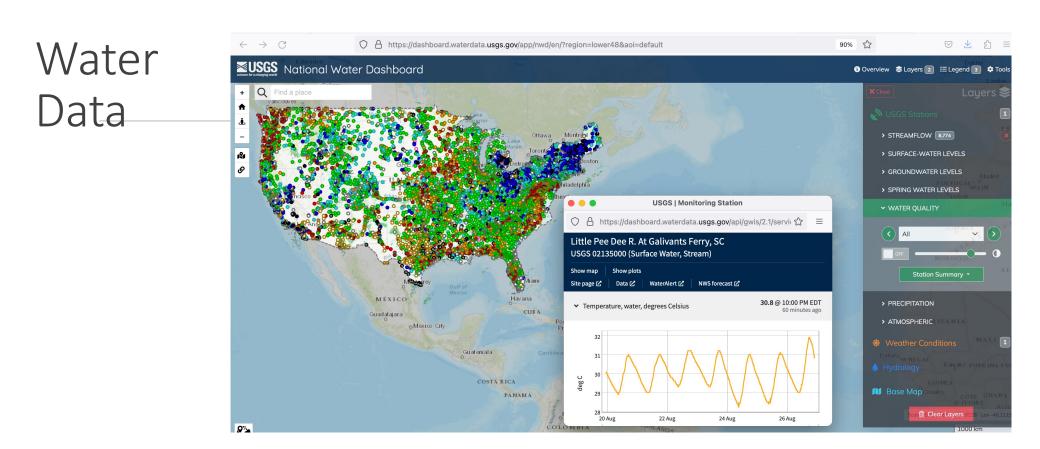

- Topic 10: Learning neural network, deep learning, Adversarial attacks
- Week 11: Large Language Models Representation, Issues
- Topic 12: Markov Decision Processes, Hidden Markov models -

#### Decision making

- Topic 13: Planning, Reinforcement Learning Sequential decision making
- Week 14: <u>AI for Real World: Tools, Emerging Standards and Laws;</u>
   Safe AI/ Chatbots

CSCE 580, 581 - FALL 2023

### Main Section

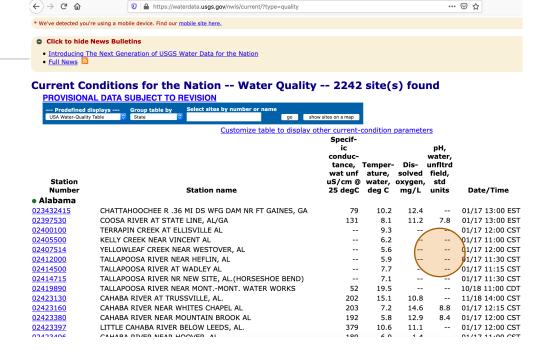

https://dashboard.waterdata.usgs.gov/app/nwd/en/?region=lower48&aoi=default

Claims data from 13,000 locations online on 26 Aug 2023

# Common Problem: Missing Value

- Occurrence
  - Missing completely at random
  - Missing at random (a group not wanting to participate)
  - Missing not at random (a group not able to participate)
- What does it mean?
  - · The value was not provided
  - The value does not exist or has no practical interpretation
  - The value is being hidden (redaction)
  - Others: The value is not reliable, ...
- How to detect it?
  - By checking for specific values: NA, Not applicable, out-of-range value, 0, -1, "".

### Missing Value – Handling

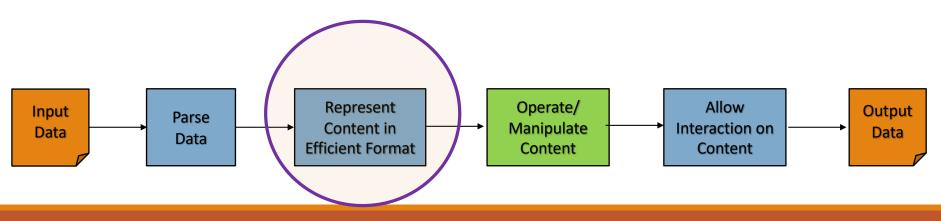

- Ignoring missing value (Omission)
  - Reduces available data
- Impute new value (Imputation)
  - Mean or median
  - Default value
- Analysis techniques which are robust against missing value
  - Expectation maximization

### Code Examples

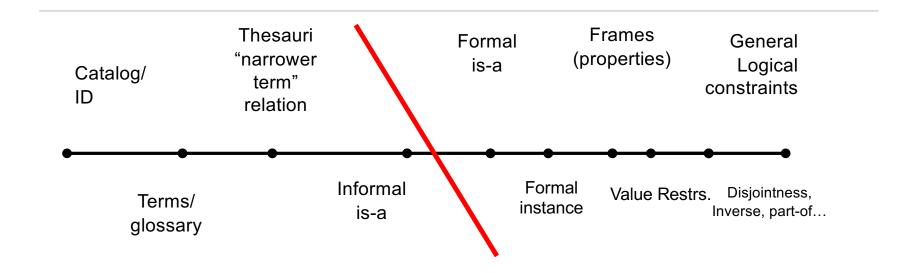

https://github.com/biplav-s/course-d2d-ai/blob/main/sample-code/I5-dataprep/

- Basic concepts: DataPreparation-Numeric.ipynb
- An illustration: Clean-RealSample.ipynb

# Annotation: Knowledge Graphs and Ontology

### The Spectrum of Annotation Methods

Ontologies Come of Age McGuinness, 2001, and From AAAI Panel 99 – McGuinness, Welty, Uschold, Gruninger, Lehmann Plus basis of Ontologies Come of Age – McGuinness, 2003

# Thesaurus – Authoritative Entities and Relationships

Countries: <a href="https://en.wikipedia.org/wiki/List">https://en.wikipedia.org/wiki/List</a> of ISO 3166 country codes

## Schema.org - continued

#### Exploration Exercise

- Services: https://schema.org/Service
- Event: https://schema.org/Event
- Benefit:
  - Easy to incorporate annotations
  - Uses popular development tools and technologies (JSON, Microformat)
- Disadvantage
  - · Cannot perform deep inferencing
  - Popular in certain communities

### Formalizing Knowledge in an Ontology

#### Sources:

Achille Fokoue, Anastasios Kementsietsidis Tutorial SCRIBE presentation by Rosario Usceda Sosa, Biplav Srivastava, Bob Schloss

- <a href="https://github.com/rschloss/ismp">https://github.com/rschloss/ismp</a>,
- https://researcher.watson.ibm.com/researcher/view\_group.php?id=2505

#### What is an ontology, anyway?

In Computer Science, "An ontology is a formal explicit description of concepts in a domain of discourse (classes (sometimes called concepts)), **properties** of each concept describing various features and **attributes** of the concept (slots (sometimes called roles or properties)), and **restrictions** on slots (facets (sometimes called role restrictions)). An ontology together with a set of individual instances of classes constitutes a knowledge base. In reality, there is a fine line where the ontology ends and the knowledge base begins." [Noy, 2000]

Not to be confused with ontologies (and/or taxonomies) in Philosophy or Life Sciences

Being
Property
Relation

Directedness
Containment

Organity
Quantity
Activity
Passivity Having Situated Spatial Temporal

In a Smart City domain, we're concerned with modeling the *city data* (city activity data, city departments, assets, KPIs), not the city itself (the full set of spatial and temporal relations between people and objects in the city) Ontologies help us to structure and reason about city *events*, *entities* and *services*.

Ontology = Class + Relations + Constraints

Knowledge Base = Ontology + instances + (Standard) Inference and rules

### RDF / Turtle Example

```
vcard:FN

John Smith

John Smith

John Smith
```

```
---- Turtle ----
<http://somewhere/JohnSmith>
<http://www.w3.org/2001/vcard-rdf/3.0#FN>

"John Smith";
<http://www.w3.org/2001/vcard-rdf/3.0#N>

[ <http://www.w3.org/2001/vcard-rdf/3.0#Family>

"Smith";
<http://www.w3.org/2001/vcard-rdf/3.0#Given>

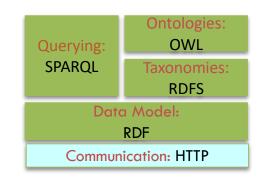

"John"
].
```

```
<rdf:RDF
   xmlns:rdf="http://www.w3.org/1999/02/22-rdf-
syntax-ns#"
   xmlns:vcard="http://www.w3.org/2001/vcard-
rdf/3.0#" >
   <rdf:Description rdf:nodeID="A0">
        <vcard:Given>John</vcard:Given>
        <vcard:Family>Smith</vcard:Family>
   </rdf:Description
   rdf:Description
   rdf:about="http://somewhere/JohnSmith">
        <vcard:FN>John Smith</vcard:FN>
        <vcard:N rdf:nodeID="A0"/>
   </rdf:Description>
   </rdf:RDF></rdf:RDF>
```

### OWL extends RDF...

#### RDF-schema

- Class, subclass
- Property, subproperty
- + Restrictions
- Range, domain
- Local, global
- Existential
- Cardinality
- + Combinators
- Union, Intersection
- Complement
- Symmetric, transitive
- + Mapping
- Equivalence
- Inverse

Source: Achille Fokoue, Anastasios Kementsietsidis Tutorial

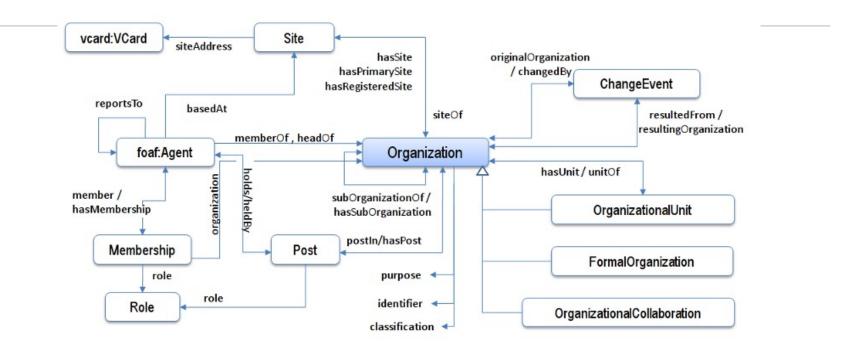

#### Not all ontologies are created equal

In practice, ontologies are used -together with inferencing engines and rules-, for a variety of purposes. If we think of them as schemas, there are different ways

			Purpose	Instances	Inferencing	Examples
Norma sch		As a deductive system	Deductive System (axioms + deductive rules)	Part of the knowledge base	Defined by rules.	Expert systems, Planning, Optimization.
		As a data blueprint	Constrain a domain	Must conform to the normative schema determined by the ontology	Subsumption, class inferencing	Biomedical and life sciences (FMA, Radlex)
		As a data classifier	Classify open data	Unknown formats	Subsumption, class inferencing	Tag ontologies (MOAT, Echarte, SCOT, NAO, etc.)
		As a data integrator	Integrating pre-defined model to existing data sources	Instances are mapped, no constraint enforcement.	Subsumption, class, entity inferencing	SCRIBE
Sc	rative hema, pend ances	As data mapping vocabulary	Mapping to/from existing data sources	Mined instances determine the ontology/schema.	Subsumption, class inferencing	D2RQ (a tool)

SCRIBE belongs to the **fourth** category: It has no constraints and was designed to support the programming of tools that allow domain experts to deal with entities natural to them (even if the recorded data is actually distributed).

## Larger Example: Organization Ontology

Ontology description: <a href="http://www.w3.org/TR/vocab-org/">http://www.w3.org/TR/vocab-org/</a>

Ontology: <a href="http://www.w3.org/ns/org.ttl">http://www.w3.org/ns/org.ttl</a>

### Moving to the future of the web

Semantic Web LayerCake (Berners-Lee, 99;Swartz-Hendler, 2001)

### Challenge of Reasoning on Ontologies

#### What makes a good ontology for data integration?

A *good* ontology is a *useful* ontology, an ontology that *both* humans and systems can process.

#### Human Usability

Communicable. Naming, natural language support, etc.

**Concise**. A simple way to describe the key entities of the model and yet able to infer many facts

Consistent. Naming conventions and modeling patterns

Authoritative to domain experts

**Documented**, not just descriptions, but also provenance

**Managed and maintained** by people throughout the model lifecycle.

Reusable in similar domains, for similar instances.

- ☐ Formal representation of knowledge in a particular domain
- ☐ Formally defines key **concepts** and **relations** in the domain
- Specifies relationships between those key concepts and relations
- Supports **automated reasoning** about entities in the domain

### System Usability

**Scalable** so large amounts of data can be parsed, stored and retrieved.

**Efficient** query and inferencing

**Programmable** solutions, both in open and closed data paradigms.

**Open** infrastructure and tools

# **Using Ontology**

- Visually via tools like Protégé <a href="https://protege.stanford.edu/">https://protege.stanford.edu/</a>
- Programmatically with APIs like
  - Jena (Java) https://jena.apache.org/documentation/ontology/
  - OwlReady2 (Python) https://bitbucket.org/jibalamy/owlready2/src/master/
  - Rdflib (Python) https://github.com/RDFLib/OWL-RL
- A compendium of resources <a href="https://github.com/totogo/awesome-knowledge-graph">https://github.com/totogo/awesome-knowledge-graph</a>

### Code Illustration

#### On Github:

https://github.com/biplav-s/course-nl/blob/master/l11-ontology/Exploring%20ontologies.ipynb

### Knowledge Graph

- No clear definition
  - "Towards a Definition of Knowledge Graphs," by Lisa Eherlinger and Wolfram Wöß, CEURWorkshop Proceedings. 2016, http://ceur-ws.org/Vol-1695/paper4.pdf
  - For practical purposes, concepts and their relationships; not constraints
  - Driven by applications in search and information integration
  - See discussion at: <a href="http://accidental-taxonomist.blogspot.com/2019/05/knowledge-graphs-and-ontologies.html">http://accidental-taxonomist.blogspot.com/2019/05/knowledge-graphs-and-ontologies.html</a>
- But ontology as knowledge graph widely used in industries
  - Industry-Scale Knowledge Graphs: Lessons and Challenges, CACM 2019, https://cacm.acm.org/magazines/2019/8/238342-industry-scale-knowledge-graphs/fulltext

	Data model	Size of the graph	Development stage	
Microsoft	The types of entities, relations, and attributes in the graph are defined in an ontology.	~2 billion primary entities, ~55 billion facts	Actively used in products	
Google	Strongly typed entities, relations with domain and range inference	1 billion entities, 70 billion assertions	Actively used in products	
Facebook	All of the attributes and relations are structured and strongly typed, and optionally indexed to enable efficient retrieval, search, and traversal.	~50 million primary entities, ~500 million assertions	Actively used in products	
eBay	Entities and relation, well- structured and strongly typed	Expect around 100 million products, >1 billion triples	Early stages of development and deployment	
IBM	M Entities and relations Various sizes. Pro- with evidence information scales documents associated with them. million, relationsh billion, entities >10		Actively used in products and by clients

KG Usage

### Lecture 3: Summary

- We talked about
  - Data preparation
  - Knowledge representation/ graph
  - Ontology

# **Concluding Section**

# Course Project

### Project Discussion: What Problem Fascinates You?

- Data
  - Water
  - Finance
- Analytics
- Application
  - Building chatbot
- Users
  - Diverse demographics
  - Diverse abilities
  - Multiple human languages

#### Project execution in sprints

- Sprint 1:
  - Solving: Choose a decision problem, identify data, work on solution methods
  - Human interaction: Develop a basic chatbot (no AI), no problem focus
- Sprint 2:
  - Solving: Evaluate your solution on problem
  - Human interaction: Integrated your choice of chatbot (rule-based or learning-based) and methods
- Sprint 3:
  - Evaluation: Comparison of your solver chatbot with an LLM-based alternative, like ChatGPT

CSCE 580, 581 - FALL 2023 3

### Project Ideas

• 1. City snapshot for Columbia, SC (like for London - <a href="http://citydashboard.org/london/">http://citydashboard.org/london/</a>)

• ...
